To whom it may concern:

I am interested in the **Software Engineer Front-End** position as advertised on ngcareers.com.

In my previous job, I worked as a Frontend Developer at SprintHub Mobile, a mobile app development agency in Port Harcourt, Nigeria. In this position, I worked closely with UI designers to create responsive and engaging user interfaces, while making sure performance remained optimal.

I have 2+ years of experience in Frontend Web application development and I have worked on a number of projects in that time, some of which can be found in my résumé.

I am familiar with web components and Polymer and I have written an article on my personal blog on web components.

Please review my résumé, which provides details of projects I have worked on and examples of skills in:

- Web development using HTML5, CSS3, JavaScript, Vue.js, Polymer.
- Translation of wireframes and rapid prototyping tools to accurate, working code.
- Fast and performant web applications that adhere to modern best practices.
- Progressive web applications built with Polymer and Web Components.

I look forward to learning more about the Software Engineer Front-End position. If my skills match your requirements, please contact me at (234) 817-432-7950 or through my email to schedule a meeting. Thank you.

Sincerely,

Kelvin Gobo
